Woolly mammoths had very long, thick hair which insulated them in the cold climates in which they lived. They also had huge tusks. Scientists think that they may have used their tusks to clear away snow, to find plants underneath that they could eat.

Woolly mammoths are thought to have developed from steppe mammoths. Steppe mammoths looked rather like elephants. They had less fur and shorter tusks than woolly mammoths. Woolly mammoths probably developed from steppe mammoths when the climate got much colder, during one of the Ice Ages.

Use the ideas of natural selection to suggest how woolly mammoths may have developed.

As in a traditional physician school, classes begin in August and end in May and students have a two-way period of six courses - no more, no less. Teachers are available from 8:30 am £ 4:30 p.m. and student day is more structured than in the Flvs Flex program with specific school announcements and student activities. Students are required to work on each course every week to stay on the right track with the traditional course of the course. Full time flvs also offers regular courses, honors, advanced placement, and double enrollment with Polk State College. Because FLVS is a public school and serves as a student registration school, students are required to participate in all standard status tests. The full-time program coordinates the tests and manages the records of your students. The full-time students of the FLV's are students from the public school and therefore can obtain a secondary education diploma issued by the State. Students can also attend a traditional graduation ceremony at the end of their last year, once all their graduation requirements are satisfied. Similar vector are important!
